

# Girl Talk Infograph

Girl Talk, as I'm sure whoever is reading this probably already knows, is a DJ that mixes and mashes a wide variety of popular songs, old-ies, and everything in-between into some interesting songs. The purpose of this infograph was to find a way to visually present one of his songs in the form of data, and find a unique aspect of his work to present rather than just what songs were mixed together.

I chose to work with what WASN'T included in the mash-ups. The amount of layers in his work is amazing. Besides the multiple layers of songs, he takes specific parts of the songs. For example, he will take just the vocals of one song, just the beat from another song, and just the guitar from another one. This graph is meant to clearly see what specific instruments are playing at what time in the song.
